Commonly called ‘the Orange Book’, this guidance for clinicians treating people with drug problems replaced the 2007 Clinical Guidelines. The 2017 version offers new guidelines on: prison-based treatment / new psychoactive substances and club drugs / mental health co-morbidity / misuse of prescribed and over-the-counter medicines / stopping smoking / preventing drug-related deaths, including naloxone provision. The new guidelines also have a stronger emphasis on recovery and a holistic approach to the interventions that can support recovery.
